

PRACTICAL WORKSHEET

Choose less. Keep what works.

Use this worksheet to notice repeated plastic contact, mark ideas worth considering, and choose one priority for the next month. The goal is not perfection; it is a safe change you can repeat.

GROUNDING IN REDUCE EXPOSURE.PDF

01 / Food and drink

Start with the plastic that repeatedly touches what you eat and drink.

- ☐ Replace frequently used plastic kitchen items with wood, ceramic, stainless steel, or glass when practical.
- ☐ Avoid routine plastic water bottles and use glass or stainless-steel drinkware.
- ☐ Compare reverse osmosis or another maintained water filter with local water quality and household needs.
- ☐ Avoid heating food in plastic containers.
- ☐ Store leftovers in glass, ceramic, or stainless steel when practical.
- ☐ Reduce single-use plastic foodware and choose fresh or minimally processed foods over heavily packaged alternatives when practical.

02 / Home and indoor air

Dust, textiles, furnishings, ventilation, and cleaning shape the indoor environment.

- ☐ Vacuum and dust regularly using a well-sealed machine with a HEPA filter when possible.
- ☐ Use damp cleaning methods that remove dust rather than repeatedly moving it into the air.
- ☐ Ventilate the home when outdoor air quality and weather make it reasonable.
- ☐ Focus on repeated routines rather than trying to create a particle-free home.

CONTINUE THE INVENTORY

Look beyond the kitchen.

Clothing, personal care, dust, ventilation, and everyday routines also shape the environment around you. Keep what is useful; change what is practical.

03 / Clothing and personal care

Choose durable materials and review the products that contact skin every day.

- ☐ Choose natural fibers such as cotton, linen, wool, or hemp when a garment already needs replacement and the material fits the use.
- ☐ Keep serviceable clothing in use instead of replacing an entire wardrobe.
- ☐ Review cosmetics and personal-care products for unnecessary synthetic polymers and plastic-associated endocrine-disrupting chemicals.
- ☐ Prioritize products that are useful, maintainable, and appropriate for the person using them.

04 / Build one habit at a time

The goal is not perfection. The goal is a small change that can be repeated for years.

- ☐ Identify the highest-frequency plastic contact in your routine.
- ☐ Choose one realistic replacement or behavior change.
- ☐ Keep established medical, food-safety, hygiene, and accessibility guidance first.
- ☐ Review what worked before adding another change.
- ☐ Share one clear, evidence-aware idea with another person.

ONE PRIORITY FOR THE NEXT MONTH**THE ONE ACTION I WILL PRACTICE**

THE CUE, LOCATION, OR ROUTINE THAT WILL MAKE IT EASIER

WHAT I WILL REVIEW BEFORE ADDING ANOTHER CHANGE

Safety boundary

Keep established medical care, hygiene, food safety, infant feeding, accessibility, emergency needs, and local water guidance first. This worksheet is educational and does not provide medical advice.
