

SELF-PACED PRACTICE

Thirty days. A slower path from evidence to routine.

The month combines practical changes with evidence literacy. It begins with one repeated exposure, then adds methods, the exposome, body-system context, and accurate sharing.

How to use this plan

Check one day at a time. Skip or adapt any task that conflicts with medical care, hygiene, food safety, infant feeding, accessibility, budget, housing, or local environmental guidance. Do not replace useful items simply to complete the plan.

MY ONE PRIORITY FOR THIS MONTH

WEEK 1

Week 1 - Notice and choose

- ☐ Day 01 - Map your routine: List repeated plastic contact around food, drinks, storage, clothing, dust, and personal care.
- ☐ Day 02 - Choose one priority: Pick the highest-frequency contact that is realistic to change this month.
- ☐ Day 03 - Stop one hot-plastic habit: Use a safe non-plastic alternative for one reheating or hot-food routine.
- ☐ Day 04 - Change one drink routine: Use glass or stainless steel for one drink you have often.
- ☐ Day 05 - Change one storage routine: Store one recurring leftover or packed meal without plastic when practical.
- ☐ Day 06 - Review your water context: Check local water information and the maintenance needs of any filter you use or consider.
- ☐ Day 07 - Week-one review: Keep the change that worked. Do not add another simply to make the list longer.

WEEK REVIEW - WHAT IS LIKELY TO LAST

WEEK 2

Week 2 - Home, clothing, and durable use

- ☐ Day 08 - Remove one disposable item: Target one recurring cup, utensil, plate, bag, or takeout container.
- ☐ Day 09 - Damp dust one zone: Clean one high-use room in a way that removes dust rather than redistributing it.
- ☐ Day 10 - Check your vacuum setup: Confirm that the vacuum is sealed and that filters are maintained according to instructions.
- ☐ Day 11 - Ventilate when appropriate: Open windows or use ventilation only when outdoor air quality, weather, and safety allow.
- ☐ Day 12 - Review one garment: When replacement is already needed, compare durable natural and synthetic options for the actual use.
- ☐ Day 13 - Keep serviceable clothing: Avoid replacing a usable wardrobe simply to complete a challenge.
- ☐ Day 14 - Week-two review: Note which home or clothing change is likely to last.

WEEK REVIEW - WHAT IS LIKELY TO LAST

WEEK 3

Week 3 - Read the evidence carefully

- ☐ Day 15 - Read how detection works: Learn why collection, blanks, preparation, instrument choice, and contamination control matter.
- ☐ Day 16 - Read the exposome: Place individual plastic choices inside a wider lifetime environmental context.
- ☐ Day 17 - Read one verified study chapter: Choose a study from the Science page and read its sample, method, finding, and limitations.
- ☐ Day 18 - Practice the claim ladder: Rewrite one headline so detection, association, and causation are not confused.
- ☐ Day 19 - Compare particles and chemicals: Keep microplastic-particle evidence separate from BPA, phthalate, and other chemical evidence.
- ☐ Day 20 - Choose one body-system overview: Read its known-versus-uncertain section before sharing the topic.
- ☐ Day 21 - Week-three review: Write one sentence that accurately states what the evidence does not yet show.

WEEK REVIEW - WHAT IS LIKELY TO LAST

WEEK 4

Week 4 - Practice, share, and keep what works

- ☐ Day 22 - Review one personal-care product: Check whether a product contains unnecessary synthetic polymers or plastic-associated ingredients, without assuming a health effect.
- ☐ Day 23 - Use one product longer: Prioritize durability and maintenance over replacing items for appearance alone.
- ☐ Day 24 - Plan one low-plastic meal routine: Choose a fresh or minimally packaged option when it fits budget, access, and dietary needs.
- ☐ Day 25 - Prepare a reusable kit: Place the cup, bottle, container, or utensils you actually use where they are easy to remember.
- ☐ Day 26 - Share one accurate finding: Name the study type and its limit when you discuss it with another person.
- ☐ Day 27 - Invite one practical change: Ask a household, school, or workplace to test one realistic reduction rather than demand perfection.
- ☐ Day 28 - Review health and safety boundaries: Keep medical care, hygiene, food safety, infant feeding, accessibility, and emergencies ahead of plastic reduction.
- ☐ Day 29 - Choose the next month's habit: Add only one new change after the first has become routine.
- ☐ Day 30 - Close the loop: Record what changed, what did not, and which evidence question you want to follow next.
