

BRIEF 06

Reducing Exposure

Progress, not perfection

EDITORIAL FRAMEWORK AND SOURCE NOTES

Completely avoiding plastic is neither realistic nor necessary. The practical goal is to identify repeated contacts and make one safe, workable change at a time.

WHAT THE CURRENT MATERIAL SUPPORTS

- Start with repeated contact around food, drinks, heat, and storage.
- Consider indoor dust, ventilation, clothing, cosmetics, and personal-care routines without trying to create a particle-free home.
- Keep serviceable products in use and prioritize durable, maintainable alternatives when replacement is already needed.
- Small, consistent changes are more useful than dramatic, short-lived efforts.

WHAT IT DOES NOT ESTABLISH

- This framework is not a detox, treatment, guarantee, or purity standard.
- Medical care, hygiene, food safety, infant feeding, accessibility, emergencies, and local water guidance come first.
- Product choices should not be marketed as preventing infertility, kidney disease, cardiovascular disease, or another condition.

INTERVIEW-SAFE LANGUAGE	Invite one realistic next step. Avoid fear-based claims, expensive overhauls, and unsupported health promises.
SOURCE STATUS	Practical framework grounded in Dr. Haddad's supplied draft: Reduce exposure.pdf.
